Award winning text recognition, OCR and PDF conversion software to create or edit electronic text documents in batch mode with the fast processing of scanned images using Optical Character Recognition (OCR). Fully compatible with Windows, Mac OS X and Linux. FineReader 14 is the ideal PDF creator for all types of image capture operations, including scanning, faxing or digital photography. Freely create professional looking documents with powerful editing capabilities including text recognition, OCR and data extraction tools. FineReader's revolutionary new layout process brings astonishing clarity to images resulting in superb readability even when scanned at low resolution or with poor contrast. The OCR technology of FineReader 14 provides exceptional accuracy out of the box without any training or user interaction. Added the ability to embed a selected image into an existing PDF file. This enables unlimited manipulation of the image within the PDF file by inserting hyperlinks, text hyperlinks and embedded images as well as per usual right-clicking on the image to select and edit it directly. Added "exif" information (EXIF) to images scanned with OCR engine for e-mailing, web posting and other processing; flatbed scanner is also now supported. Using EXIF is optional and can be turned off using the OCR settings (it is off by default). Enhanced performance: fineReader utilizes a new multi-threaded algorithm that renders even more images per minute. FineReader 14 is the first in the industry to provide fast and accurate OCR for scanned documents (for example, business cards, using ABBY Screenshot Reader). FineReader 14 offers automatic segmentation of pages in PDF files with high accuracy in rendering text. Portable version has been added in this release to make it possible to move your installation folder to another location when installing the software on multiple machines (can be turned on when installing).
